

# Solving Microservice Mysteries with Envoy's Tap Filter

Solution, slides, and sample code will be posted after the session.  
Please bring your laptop to participate in the investigation!

The bottom of the slide features two decorative images separated by a diagonal white line. The left image shows a city skyline at night with illuminated buildings. The right image shows a street lined with palm trees during sunset or sunrise.

**Mitch Kelley**  
Software Engineer, Solo.io

The **Tap Filter** captures the **headers and bodies** of the **full request and response** when a given **match criteria** is met.

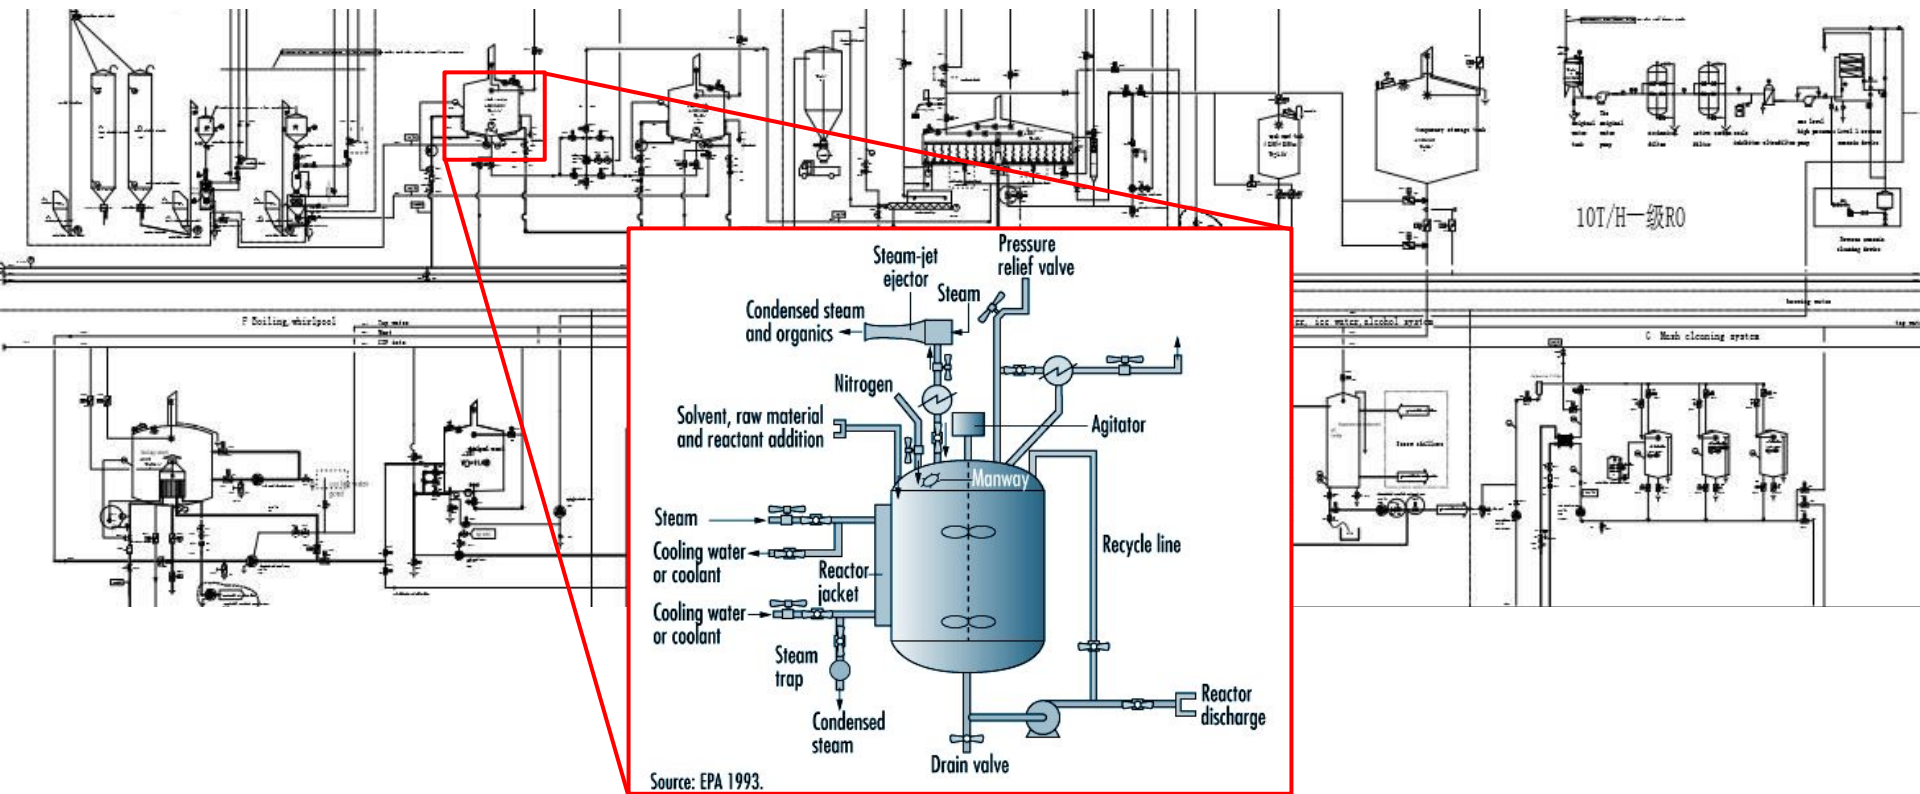

The **Tap Filter** captures the **headers** and **bodies** of the **full request** and **response** when a given **match criteria** is met.

Mythologies Volume II:

On User Experience

**Honest Status Page**

@honest\_update

We replaced our monolith with micro services so that every outage could be more like a murder mystery.

4:10 PM · Oct 7, 2015 · [Buffer](#)

# Mystery Service Game

Imagine you have **nine** services, deployed in **six** different cloud environments, coordinating over **six** API versions. And something goes wrong.

**324 possible failure categories.**

Spooky, but not compared to your real environment.
